

June27, 2001

Mr. Shelby Hudgens  
Unimin Corporation  
P.O. Box 370  
Aurora, IN 47001-0370

Re: 029-14417  
Second Notice-only change to  
Registration 029-11736-00022

Dear Mr. Hudgens:

Unimin Corporation was issued a registration on March 30, 2000 for a non-metallic mineral processing facility. A letter notifying the Office of Air Quality of a change was received on May 29, 2001. Pursuant to the provisions of 326 IAC 2-5.5-6, Registration 029-11731-00022 is hereby revised as follows:

The revision consists of the following changes (deleted language in ~~strikeout~~, added language in **bold**):

The filter media in dust collector DC-02 was changed from paper filter to spun bond polyester cartridges. The upgrade in filter media improved the dust collector performance. In order to maintain optimal dust collection an adjustment of the pressure drop range is needed.

#### (4) Parametric Monitoring

---

The Permittee shall record the total static pressure drop across the baghouses used in conjunction with the drying, screening, bagging and bulk loadout processes, at least once weekly when the drying, screening, bagging and bulk loadout processes are in operation when venting to the atmosphere. The pressure drop across the baghouses shall be maintained within the ranges specified below:

The pressure drop ranges for collectors DC-01 through DC-05 shall indicate a range as follows:

DC-01:	1.8 to 3.3 inches of water for chamber 1 3.2 to 5.9 inches of water for chamber 2
DC-02:	<del>2.3 to 4.2 inches of water</del> <b>3.0 to 6.0 inches of water</b>
DC-03:	2.8 to 5.2 inches of water
DC-04:	1.8 to 3.3 inches of water
DC-05:	3.5 to 6.5 inches of water

The instrument used for determining the pressure shall comply with the Pressure Gauge Specifications of this permit, and shall be calibrated at least once every six (6) months.

Second Notice-Only 029-

All other conditions of the permit shall remain unchanged and in effect. Please attach a copy of this letter and the following revised permit pages to the front of the original permit.

This decision is subject to the Indiana Administrative Orders and Procedures Act - IC 4-21.5-3-5. If you have any questions on this matter, please contact Gail McGarrity, at (800) 451-6027, press 0 and ask for Gail McGarrity or extension (3-0242), or dial (317) 233-0242.

Sincerely,

Re: 029-14417  
Revised Registered Construction and Operation  
Status,  
029-11736-00022

Dear Mr. Hudgens

The application from Unimin Corporation, received on December 27, 1999, has been reviewed. Based on the data submitted and the provisions in 326 IAC 2-5.5, it has been determined that the following operations at the non-metallic mineral processing facility, to be located at 137 Franklin Street, Aurora, Indiana, are classified as registered:

- (1) Drying and Screening process, with a maximum capacity as claimed confidential by the source, using three (3) baghouses, identified as DC01, DC02 and DC05 as particulate control devices. This process also uses a rotary dryer, identified as DR01, with a maximum capacity as claimed confidential by the source.
- (2) Sweco, bagging and bulk loadout processes, with a maximum capacity as claimed confidential by the source, using one (1) baghouse, identified as DC04 as a particulate control device.
- (3) Sand system, with a maximum capacity as claimed confidential by the source, using one (1) baghouse, identified as DC03 as a particulate control device.
- (4) One impact crusher, identified as CR-01, with a maximum capacity as claimed confidential by the source, with uncontrolled emissions

The following conditions shall be applicable:

- (1) 326 IAC 5-1 (Visible Emissions Limitations)  
Pursuant to 326 IAC 5-1-2 (Opacity Limitations), except as provided in 326 IAC 5-1-3 (Temporary Alternate Opacity Limitations), opacity shall meet the following, unless otherwise stated in this permit:
  - (a) Opacity shall not exceed an average of forty percent (40%) any one (1) six (6) minute averaging period as determined in 326 IAC 5-1-4.
  - (b) Opacity shall not exceed sixty percent (60%) for more than a cumulative total of fifteen (15) minutes (sixty (60) readings) as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute nonoverlapping integrated averages for a continuous opacity monitor) in a six (6) hour period.
- (2) 326 IAC 6-4 (Fugitive Dust Emissions)  
Pursuant to 326 IAC 6-4 (Fugitive Dust Emissions), if fugitive dust is visible crossing the boundary or property line of the crushed stone plant, the source is in violation of the fugitive dust rule.

(3) 326 IAC 6-3-2 (Process Operations)

The particulate matter (PM) from the drying, screening, sweco, bagging, bulk loadout and sand operations shall be limited using the following equation:

Interpolation and extrapolation of the data for the process weight rate up to sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour and} \\ P = \text{process weight rate in tons per hour}$$

The baghouses shall be in operation at all times the drying, screening, sweco, bagging, bulk loadout and sand operations are in operation, in order to comply with this limit.

(4) Parametric Monitoring

The Permittee shall record the total static pressure drop across the baghouses used in conjunction with the drying, screening, bagging and bulk loadout processes, at least once weekly when the drying, screening, bagging and bulk loadout processes are in operation when venting to the atmosphere. The pressure drop across the baghouses shall be maintained within the ranges specified below:

The pressure drop ranges for collectors DC-01 through DC-05 shall indicate a range as follows:

DC-01:	1.8 to 3.3 inches of water for chamber 1 3.2 to 5.9 inches of water for chamber 2
DC-02:	3.0 to 6.0 inches of water
DC-03:	2.8 to 5.2 inches of water
DC-04:	1.8 to 3.3 inches of water
DC-05:	3.5 to 6.5 inches of water

The instrument used for determining the pressure shall comply with the Pressure Gauge Specifications of this permit, and shall be calibrated at least once every six (6) months.

(5) Pressure Gauge Specifications

Whenever a condition in this permit requires the measurement of pressure drop across any part of the unit or its control device, the gauge employed shall have a scale such that the expected normal reading shall be no less than twenty percent (20%) of full scale and be accurate within plus or minus two percent ( " 2%) of full scale reading.

This registration is a revised registration issued as a source-wide permit for the source. The source may operate according to 326 IAC 2-5.5.

An authorized individual shall provide an annual notice to the Office of Air Management that the source is in operation and in compliance with this registration pursuant to 326 IAC 2-5.5-4(a)(3). The annual notice shall be submitted to:
